Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Cortright et al., U.S. Pat. Application Pub. 2003/0220531 A1.

Rejection of claims 1-18 drawn to an electrode; claims 19-20 drawn to a fuel cell.

Cortright et al., teach an electrode for a fuel cell comprising a catalyst including a proton-conducting substance (sect. 0031). It teaches a catalyst, a carrier supporting the catalyst, a catalyst comprising an ion-exchange resin, and a conductive porous substrate supporting ht catalyst, wherein the catalyst includes a proton-conducting substance (sect. 0018). It teaches the proton-conducting substance is an acid, which is solid, and is a heteropolyacid (sect. 0045). It teaches the heteropolyacid is phosphotungstic acid (sect. 0045). It teaches the proton-conducting substance is a fullerene derivative (sect. 0018; 0077). It teaches a fuel cell (sect. 0004; 0028; 0031) comprising the above-described electrode.

Thus, the claims are anticipated.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nokuma et al., WO 01/13295, teach a proton-conductive electrode for fuel cells comprising a fullerene derivative. Yonezu et al, JP 2002-015746, teach a fuel cell electrode comprising a catalyst and a proton conducting body.
